RESEARCH INTERESTS

My research is interdisciplinary in sedimentology, coastal and hydraulic engineering, and geophysics, applying methodologies ranging from field surveys and laboratory analysis to analytical and numerical modeling. Of special interest to me is the remote characterization of sedimentary environments, which includes sensing the properties of flows and particles at rest and in motion, in single and multiphase flows, both terrestrial and subaqueous, by developing novel acoustics and optics instrumentation and computational algorithms

I was awarded my PhD in Nearshore Oceanography from the University of Plymouth, UK, in 2008. My doctoral research was on the mechanics of gravel transport under energetic water waves and gravel beach morphodynamics. Since then, I have worked in various marine and riverine environments, studying the complex inter-relations between fluid flows, geomorphology, sediment transport and sedimentology. I have investigated these processes by developing novel field-deployed optical and acoustic imaging systems, and computational algorithms for small-scale sediment hydroacoustics, in-situ particle and bed imaging and flow-field/turbulence measurements. As part of this work, I have developed extensive experience with field data collection and laboratory experimentation, numerical methods and stochastic modeling techniques, community software development, instrument design and fabrication and fundamental research in sediment transport. In recent years, I have developed an interest in the role sediment heterogeneity and transport in the dynamics of aquatic ecosystems.

RESEARCH STATEMENT

Principally, I measure sediment: what is it made of; what lives in or on it; how it gets picked up by flows of air and water; how it gets deposited into landforms; how these processes evolve in time due to feedback processes; how it gets preserved in the rock record. The properties of sediment (grain size, shape, packing, cohesion, etc) fundamentally control what grows in or on it; how fast and far it moves; how long it stays there. These properties govern the dynamics of air and water turbulence; water turbidity; formation of dunes in deserts, rivers and seas; the attenuation and scattering of light and sound; and landform stability. Documenting and understanding how sediment properties change in time and space is fundamental to understanding and modeling the hydraulics of open channel flow; the mechanics of sediment transport in water and air; the evolution of landforms; and the distribution of primary producers which support ecosystems of all types. I am intellectually stimulated by the dynamic role of sediments in sediment transport, geomorphology and aquatic habitats, mediated by how sedimentary materials change in space and time. Measuring sediment properties (such as grain size) of a given sample is obviously well-established. However, measuring the properties of sediments continuously in time or in space is notoriously difficult, because it precludes physical sampling of the sediment and subsequent laboratory analysis, which is prohibitively time-consuming and expensive, as well as physically and ecologically destructive. Instead, sediment properties need to be remotely sensed. Traditionally, this has imposed severe limits on how sediment properties have been incorporated as a dynamic variable into models and understanding of physical and biological processes, allowing only a static role of sedimentary materials as a boundary or context to contemporary earth surface and ecological processes, and the dynamics of environmental change. In reality, sediment is both dependent and independent variable in many of these processes, and should be measured and modelled continuously in time like flows of water and populations of organisms. Understanding these processes requires being able to measure sediments properties at high temporal and spatial resolution and great spatial coverage. Much of my career to date has therefore been devoted to developing instrumentation, computational and analytical tools which allow measurements of sediment at unprecedented scales and resolutions. In the coming years, methods for measuring the reflectance and scattering of light and/or sound to remotely characterize terrestrial and underwater surfaces and infer sediment properties will continue to mature. I wish to continue to be at the forefront of this nascent science. These techniques have opened up the possibility of mapping sedimentary deposits, surface roughness and depositional sedimentary environments over large areas, and monitoring those areas in time. Compared to a few discrete samples in locations accessed physically, this will provide more fundamental insight into geomorphological and ecological processes, by massively expanding the scope of what time and spatial scales and resolutions can be monitored, and could significantly alter the way in which environmental research is carried out.

EDUCATION

Ph.D. (2008), Coastal Geomorphology/Nearshore Oceanography, University of Plymouth, Plymouth, UK. *Morphodynamics, Sediment Dynamics and Sedimentation of a Gravel Beach*. Advisor: Prof. Gerhard Masselink.

BSc (Hons), 1st class (2003), Physical Geography with Minors in Environmental Sciences and Biology, Lancaster University, Lancaster, UK. *Morphodynamics of a Ridge-and-Runnel System on a Macrotidal Beach*. Advisor: Dr Suzanna Ilic.

EMPLOYMENT HISTORY

November 2012 – present. *Research Geologist, Grand Canyon Monitoring and Research Center, U.S. Geological Survey, Flagstaff, AZ, USA.*

October 2009 – November 2012. *Post-doctoral Research Fellow, School of Marine Science & Engineering, University of Plymouth, UK.*

September, 2008 – 2011. *Computer Programming Contractor, Marine Biology & Ecology Research Centre, University of Plymouth, UK.*

October, 2008 – October 2009. *Post-doctoral Research Scholar, United States Geological Survey, Santa Cruz, California, USA.*

June, 2008 – September, 2008. *Research Assistant, School of Geography, University of Plymouth, UK.*

December, 2007 – April, 2008. *Research Assistant, School of Earth, Ocean & Environmental Science, University of Plymouth, UK.*

October, 2004 – July 2008. *Associate Lecturer and Demonstrator (part-time), School of Geography, University of Plymouth, UK.*

August 2003 - September, 2004. *Assistant tutor, Field Studies Council, Castle Head, Grange-over-Sands, UK.*

Schmidt and others), (2015 - 2017) *Sandbars and sediment storage dynamics: long-term monitoring and research at the site, research and ecosystem scales*, Grand Canyon Monitoring and Research Center Triennial Work Plan. Glen Canyon Dam Adaptive Management Work Group (\$4,253,400).
- 12 Principal-Investigator (2015 - 2016) *LOBOS (Limnological and Oceanographic Benthic Observation System): The next generation dual-scale submersible benthic imaging system*, jointed funded by the USGS Innovation Fund (\$16,497), the Innovation Center for Earth Science Director's Fund (\$17,497) and the USGS Southwest Biological Science Center (\$15,000) (\$48,994 total).
- 13 Principal-Investigator (2015 - 2016) *The digital grain size web and mobile computing application*, funded by the USGS Center for Data Integration (\$46,417).

TEACHING EXPERIENCE

Before undertaking my PhD studies, I worked full-time for a year (2003-2004) for the Field Studies Council at Castle Head (UK), a residential outdoor education centre near Grange-over-Sands in the Lake District, UK. My duties included teaching basic ecology, geology and environmental studies to a range of age groups. These courses were mostly field and field-laboratory based. Throughout my time at Plymouth University as a PhD candidate (2004-2008), I lectured undergraduate classes (in the School of Geography) in a range of courses on coastal, glacial and fluvial geomorphology, which included planning and leading field trips. I also lectured on quantitative methods and application of the scientific method. I have led laboratory classes on topics such as stratigraphic analysis of cores and particle size analysis techniques, as well as practical workshops in topographic surveying, cartographic techniques, and statistical analysis. In 2007, I organised and led a 1 day field excursion as part of a national coastal conference (YCSEC).

I had no formal teaching role as a post-doctoral research fellow at the University of California Santa Cruz (2008-2009) and subsequently at the University of Plymouth (2009-2012), however at Plymouth I did teach classes in fluid mechanics (boundary layers, turbulent flow) and coastal processes (beaches and barriers, tides). I also lectured in a short course for the UK Environment Agency on coastal sediment transport processes. The emphasis there is on the practical application of knowledge (in this case, sediment transport models). At Plymouth, I served on two graduate (Masters) student committees, both in Oceanography.

Since joining the USGS (2012 to present) again I have had no formal teaching role, however, I have lectured for Teki Sankey's EES529: Applied Remote Sensing class for the past 2 years, and in the fall 2015 semester have contributed to the "Topics in Fluvial Geomorphology" seminar (EES691). I currently serve on the committees of 3 graduate students: two Masters students at Utah State University, and 1 PhD student at University of Wyoming. In January 2016, I will run a Software Carpentry course for the Flagstaff science campus (a collection of geologists, ecologists, and hydrologists) on basic-intermediate level computer and data science.

PROFESSIONAL ACTIVITIES

Membership

British Society for Geomorphology; International Association of Sedimentologists (IAS); American Geophysical Union (AGU); Coastal Zone Network (COZONE); The Challenger Society for Marine Science.

Journal Review

Arctic; Continental Shelf Research; Earth Surface Processes and Landforms; Geo-Marine Letters; Geophysical Research Letters; Journal of Hydraulic Engineering; Journal of Mountain Science; Journal of Sedimentary Research; Marine Geology; Sedimentology; Sedimentary Geology; Water Resources Research.

Conferences Organised

On the organising committee for:

- 1 *The Quaternary Research Association's 4th International Postgraduate Symposium*, hosted by the School of Geography at the University of Plymouth 31st August - 2nd September 2005.
- 2 *Young Coastal Scientist and Engineers Conference, 2007* (YCSEC 2007) hosted by the School of Geography at the University of Plymouth 19-21 April 2007.
- 3 *American Geophysical Union Fall Meeting*, December 2007: H60. Linking sediment supply, bed-sediment particle size, sediment transport, and bed morphology in fluvial, marine, and aeolian settings. Co-convened with David Rubin (USGS), David Topping (USGS), and Scott Wright (USGS).
- 4 *American Geophysical Union Fall Meeting*, December 2013: EP010. Fluvial sediment budgets: Can we do better? Co-convened with David Topping (USGS), Paul Grams (USGS), and Susannah Erwin (USGS).
- 5 *2nd Multibeam in Rivers Workshop*, March 2015. Co-convened with Paul Grams (USGS), Matt Kaplinski (NAU)

and Joe Wheaton (USU).

SKILLS

- 1 Community models: General Ocean Turbulence Model (GOTM, <http://www.gotm.net/index.php>); Simulating Waves Nearshore (SWAN; <http://www.swan.tudelft.nl/>); Simulating Waves 'til Shore (SWASH; <http://swash.sourceforge.net/features/features.htm>).
- 2 Linux. High performance and distributed computing.
- 3 Programming/Scripting: Python, BASH, Matlab (proficient); Cython, Kivy, Fortran (experienced); C, R (beginner).
- 4 Full UK driving licence. Arizona State driving licence. LANTRA sit-astride ATV qualification.
- 5 Other interests: instrument control, machine vision, L^AT_EX GUI development, machine learning, spectral analysis, stochastic modelling, image analysis

INVITED TALKS

- 1 *Slapton Research Seminar, Field Studies Council, Slapton Ley*, 4th December 2004. Talk entitled 'A tale of two storms'.
- 2 *Slapton Research Seminar, Field Studies Council, Slapton Ley*, 18th November 2006. Talk entitled 'A view from the beach'
- 3 *Centre for Coastal Dynamics and Engineering (C-CoDE)*, University of Plymouth, 6th December 2006. Talk entitled 'Field observations of morphological change and sediment dynamics from the nearshore of a gravel beach'
- 4 *Slapton Research Seminar, Field Studies Council, Slapton Ley*, 3rd November 2007. Talk entitled 'A year in the life of Slapton Sands - but was it a typical year?' with Tom Deacon (SLFC).
- 5 *Lancaster University Environmental Imaging Network*, 20th May 2008. Talk entitled 'Optical sensing of gravel sediment transport and characteristics: recent advances and future challenges'.
- 6 *Coastal and Marine Geology, United States Geological Survey, Santa Cruz*, 28th January 2009. Talk entitled 'Morphodynamics and sediment dynamics of a macrotidal gravel beach'.
- 7 *Centre for Coastal Science and Engineering, University of Plymouth*, 17th February 2010. Talk entitled 'Turbulence, Sediment Stratification and Altered Resuspension under Waves'.
- 8 *Grand Canyon Monitoring and Research Center, Flagstaff, Arizona*, 27th February 2012. Talk entitled 'Nearshore Sediment Transport Through the Looking Glass'.
- 9 *British Geological Survey, Marine Geosciences Division, Edinburgh*, 13th July 2012. Talk entitled 'Digital Grain Size'.
- 10 *Multibeam in Rivers Summit, Utah State University, Logan, Utah*, February 2014. Talk entitled 'Bed Sediment Classification Using High-Frequency Acoustic Backscatter'.
- 11 *Glen Canyon Dam Adaptive Management Program Adaptive Management Work Group Meeting, Flagstaff, Arizona*, August 2014. Talk entitled 'Measuring bed sediments for improved sediment budgets and physical habitat assessment'.
- 12 *USGS Coastal and Marine Geology, Woods Hole, MA*, February 2015. Talk entitled 'The Digital Grain Size Project: Past, Present and Future'.
